Hello Palmer,

Enjoying the keystone meetings right now. Not sure if you are paying attention, but yesterday in response to one of my questions, Dudley Reiser, Pebble Consultant, stated that it was "counter-intuitive to propose to remove beaver dams as a reclamation measure. Beaver ponds are integral fish habitat."

To your question -

The fish escapement (Carol Ann Woody) and water quality (Kendra Zamzow) papers you should have. I can resend if you need or you can find them here - <http://www.pebblescience.org/pebble-ebd-critiques.html>

The PHABSIM paper was contracted out to a man named Piotr Parasiewicz, who is an expert on PHABSIM, and we just got the near final draft back last week. Suffice it to say, it was tough to get him on the task. Hope to have it over to you shortly.

Sam:

I hope you are well. In the email below you mentioned two more white papers regarding the EBD on water quality and fisheries escapement. Did you send those? I don't seem to have any record of receiving those.

Thanks, Palmer

Subject: More EBD Review White Papers

Palmer,

I hope this email finds you doing well. I have attached two more EBD review white papers - seismic and hydrology. These got a bit delayed due to Watershed Assessment review work. We have two more on the way: Water Quality, Fisheries Escapement and PHABSIM. I should have the first two to you by the end of the week.

Feel free to contact me if you have any questions.

Best  
Sam
